

## Photoelectric sensors

### Analog output sensors

Bernstein has extended its M 18 photoelectric range through a diffuse-reflective sensor with an analog output. Suitable for sensing distances between 30 and 200 mm, the required sensing distance can easily be set within this range via a programming wire.

The sensor sets a new amplification, by means of a brief connection to the positive operating voltage (0.1 - 10 s). Parameters such as the steepness of the characteristic curve and direction can be factory programmed.

The following voltage and current signals are available on the output side: 0-10 V, 0-20 mA and 4-20 mA.

The new diffuse-reflective sensor with analog output is available in the following housing variants:

Threaded design in plastic, brass, stainless steel and in smooth stainless steel barrels with a 20 mm diameter.

An M 12 x 1 plug was chosen for the connection.
